

Symmetrical Letters

Have your child trace the letters below. Teach what symmetry is: “When something looks the same on both sides. If you were to flip it over, it would meet together perfectly.” Teach them how these letters below are symmetrical. To practice showing, cut the letters out below following along the lines, then show your child how you can fold it over perfectly down the middle (side-ways) to show symmetry of meeting together on the ends to match perfectly.
